Summary:

Experienced Data Scientist with a strong background in data processing, visualization, predictive and statistical modeling. Proficient in Python, Pandas, Matplotlib, Seaborn, Scikit-learn, SQL and Tableau, with expertise in developing predictive models and data processing. Skilled in cloud-based data management tools. Passionate about leveraging data to drive business insights and operational efficiency.

Skills:

- **Programming & Data Science:** Python (Pandas, Scikit-learn, Statsmodels, SciPy, SQLAlchemy, Psycopg2).
- **Database & SQL:** Querying, Data insertion & Update (PostgreSQL).
- **Machine learning & AI:** Regression Models, Random Forest, XGBoost, PCA, K-Means, ANN.
- **Model deployment & Cloud:** GitHub Actions, Jenkins, Streamlit, AWS (S3, EC2, Lambda, SageMaker).
- **Statistics & Optimization:** Bayesian inference, Hypothesis Testing, Linear and Integer Programming (CPLEX).

Experience:

Data Scientist | Pitstop Connect, Toronto, ON | from Sep 2020 to Jan 2024

- Developed a **predictive maintenance model** reducing unexpected vehicle breakdowns by 50% through early failure detection.
- Created an **alert system for engine start issues**, reducing winter-related failures by 40%.
- Built a **TF-IDF-based text processing model** to classify Diagnostic Trouble Codes (DTCs), improving system fault analysis.
- Implemented a data pipeline using Git for version control and AWS S3 for data management, ensuring efficient data processing and analysis.

Projects:

- **Loblaw Company Limited (LCL) Canada:**
 - Worked on a short-term project detecting temperature-sensitive sales across the stores in Ontario, Canada.
- **MIT-IDSS Hackathon: Passenger Satisfaction in Bullet Trains:**
 - Ranked **10th out of 40 teams** with an accuracy of 95.15% (top score: 95.86%).
 - Identified key customer satisfaction drivers (Seat comfort, Onboard entertainment, Check-in service, Baggage handling, Online support, and Cleanliness).
- **Customer Loyalty Score Prediction:**
 - Used **Random Forest Regressor** to predict missing loyalty scores and segment high-value customers.
- **Product Relationship Analysis (Association Rule Learning):**
 - Applied **Apriori algorithm** to optimize store layout and bundle promotions in a grocery store.
- **Customer Segmentation (K-Means Clustering):**
 - Segmented customers based on grocery purchase behavior for targeted marketing strategies.

Education:

Toronto Metropolitan University (TMU) (formerly Ryerson University) | Toronto, ON | 2015

- PhD in Industrial Engineering with expertise in real options valuation for energy systems.
- Published research on real options and energy economics in top peer-reviewed journals (Journal of Cleaner Production, Energy Economics, etc.). Full list available on request.

Certification & Course:

- **Certified Analytics Professional (CAP):** INFORMS
- **Machine Learning Specialization:** Deeplearning.ai
- **Python for Data Science:** University of Chicago
- **Probability and Statistics for Data Science:** Coursera
- **Data Science & Machine Learning: Making Data-Driven Decisions:** MIT IDSS
