

Reaz Elias

Toronto, ON · +1647-404-9221 · elias.reaz@gmail.com · [LinkedIn](#)

Data Scientist with over 4+ years of hands-on experience delivering impactful business solutions at a Toronto startup. Expertise spans the complete data science lifecycle, including data wrangling, visualization, advanced modeling (Random Forest, XGBoost, ANN), Time Series Forecasting, deployment, and continuous monitoring. Proficient in Python, SQL, Applied Statistics, Machine Learning, and MLOps Cloud services. AWS Certified AI Practitioner.

PROFESSIONAL EXPERIENCE

Pitstop & Government-affiliated Fisheries Department (via internal referral), ON

05/2024 – present

Freelance Data Scientist

- Conducted predictive maintenance analysis for fault codes and service records to evaluate alert accuracy (TP/FP/FN/TN); developed Python scripts to automate data matching, classification, and accuracy reporting, improving transparency of fleet diagnostics.
- Designed and implemented a unified fish species database for Fisheries and Oceans Canada (DFO), integrating multi-source data from US and Canadian agencies using Python, pandas, and SQLite.

Pitstop Connect, ON, Toronto

09/2020 – 01/2024

Data Scientist

- Predictive maintenance model: Reduced unexpected vehicle breakdowns by 50% through early failure detection by identifying patterns in diagnostic fault codes (DTC) to surface potential subsystem failures early.
 - Alert for engine starting issues: Reduced winter-related failures by 40%. Developed a predictive model for parked vehicle battery failures, reducing unexpected starting issues.
 - TF-IDF-based text processing model: Parsing diagnostic trouble/fault codes descriptions to infer VMRS (Vehicle Maintenance Reporting Standards) code for improving system fault analysis.
 - Data Analysis: Clean, process, insert fleet service records into the database; Analyze relevancy between Service records & fault codes, prepare relevance matrix; Quality assessment of algorithm alerts; Retrieved historical fault code data via APIs from telematics platforms.
-

PROJECTS

Data Science ([Project Portfolio](#))

- Built reproducible time series workflows using SARIMA, Prophet, integrated with MLflow and DVC for experiment tracking and versioning. Config-driven architecture supports scalable deployment and automated evaluation.
 - MIT-IDSS Hackathon - Bullet Train Passengers' Satisfaction: Ranked 10/40 teams with 95.15% accuracy. Used XGBoost to identify top satisfaction drivers: comfort, entertainment, check-in, and cleanliness.
 - Customer Classification - Marketing Campaign: Used Random Forest to predict sign-ups, enabling targeted outreach, reduced mailing costs, and improved ROI.
 - Customer Segmentation - K-Means Clustering: Grouped customers by grocery behavior for personalized marketing.
 - Loyalty Score Prediction: Predicted missing scores using Random Forest, aiding in high-value customer targeting.
-

SKILL

- Programming: Python (Base, Anaconda env, Pandas, Scikit-learn, Statsmodels, SciPy, SQLAlchemy, Psycopg2), SQL. Familiar with R. Machine Learning: Random Forest, XGBoost, K-Means clustering, PCA, ANN. Model deployment & Cloud: MLflow, Airflow, DVC, GitHub Actions, Flask, Docker, Streamlit, AWS S3, EC2, Lambda, SageMaker. Statistics & Optimization: A/B Testing, Hypothesis Testing, Bayesian Inference, Time Series Analysis: Statsmodels, SARIMA, Prophet, LightGBM, seasonal decomposition, forecasting pipelines
-

EDUCATION/ CERTIFICATIONS

- PhD (Mechanical & Industrial Engineering) Toronto Metropolitan University (TMU), formerly Ryerson University, Toronto, ON.
- Machine Learning Specialization | [Deeplearning.ai](#)
- Time Series Analysis in Python, Introduction to MLflow, Apache Airflow, Databricks (Datacamp)
- MLOps Bootcamp with End-to-End ML Projects (Udemy)
